
Dmitry Ratnikov <resume@ratnikoff.com>

Brooklyn, NY 11215

TL;DR: A principled and creative principal engineer that will fix your problem and also the problems that caused the problem.

Impact

SupplyChain Platform

- Partnered with Product to delivery a foundational SupplyChain platform to sustain Wonder's pre-IPO growth.

Development Platform

- Built a Monorepo + Bazel platform, bypassing widespread repository copy-pasting to establish a stable environment for local domain delivery.
- Expanded the localized platform beyond the immediate domain to ≈ 10 engineers and influenced wider adoption of monorepo approach.

Architectural Governance

- Defined and applied quality standards to mitigate quality degradation stemming from outsourcing staffing strategy and AI-first code exploration.
- Automated standards enforcement through LLM, shifting human review from mechanical syntax validation to high-level logic.

Force Multiplier

Technical Steering & Strategy

- Executed architectural roadmaps across both high-growth startups (5 SWEs) and enterprise environments (30 SWEs) to scale sustainably.
- Shielded engineering focus by mediating alignment between engineering and executive leadership through rigorous analysis, technical depth, and unconventional options.
- Transformed on-call rotations from reactive, high-fatigue operations into a high-signal, scalable organization; lowered expertise barrier to fuse adjacent rotations.

Talent Amplification

- Converted code and design reviews into active mentorship loops.
- Accelerated peer professional growth by stretching capabilities with high-ambiguity challenges while providing continuous architectural oversight.
- Cultivated a high-standard engineering culture through hands-on technical execution.

Technical Arsenal

- Systems & Languages: Kotlin, Java (JVM Mastery), Go, Distributed Persistence (PostgreSQL, Event Sourcing)
- Engineering Platforms: Monorepo Design, Bazel Platform Architecture, Dependency Graph Optimization (pp. 1-2)
- SRE & Observability: High-Signal Observability (Datadog), SLO-Driven Alerting, Automated Pipeline Verification Gates
- Applied Intelligence: LLM-Powered Semantic Review Pipelines, Automated Governance, Programmatic Style Enforcement.

Previous Work

Wonder — Principal Engineer in SupplyChain	2024 - Current
Google — Staff SWE (L6) / Senior SWE (L5) / SRE / SWE	2021 - 2024
Webitects — Web Developer	2008 - 2010

Additional Background

- Education: Illinois Institute of Technology — BS in Computer Science & Physics
- Aviation: Private Pilot (~450hr ASEL w/ IR) — Navigating complex systems in 3D space.
- Community: Burning Man Ranger Volunteer (7 years, WESL, GreenDot) — mediating high stress situations in dust storms.
